

FIT FLOOR-TO-CEILING SOLUTION.

Bring your Matrix station to the next level with FIT. FIT allows for the privacy of a floor-to-ceiling workspace, without penetration of the ceiling grid. FIT is an aluminum extruded ceiling mounted channel which retains AIS Matrix panels flush to a suspended or fixed ceiling.

**FLOOR-TO-CEILING  
MADE EASY AND COST  
EFFECTIVE.**

Revamp your office environment by adding FIT to existing Matrix stations, and easily create private workstations and conference areas. The FIT telescoping channel adjusts for use on un-level floors and ceiling. The unique design of the multi-part, telescoping channel accommodates gaps of 9" or less, between ceiling and frames. Coupled with the Matrix 8 inch stack increment, FIT allows *any height* ceiling to be accommodated without the need for custom cut frames, tiles or connector posts.

Limitless possibilities. A unique system of hilo and trim shrouds allows FIT to be integrated with standard Matrix heights to create a multi-height environment where private, floor to ceiling offices are combined with manager and task stations in an open plan environment.

Paired with glass Matrix tiles, FIT is the perfect combination of privacy and light. While FIT offers the seclusion of a private office, glass tiles allow natural light and an open feel to the workspace.

FIT is a Greenguard certified product. It has been tested and is certified for low chemical emissions and does not contribute to indoor air pollution.
